

優れている点:

1. the end-to-end delay is only a few seconds, real-time monitoring
2. Serverless, low cost, high speed,
3. event trigger application
4. high throughput, easy to expand

懸念点:

1. Integration of statistical data with existing data
2. Dashboard and other screens use different data sources, and need to be developed separately
3. transaction management of multiple data sources
